Hi,

I agree with what Sebastian said. But let me try to bring your focus back to the open problems.

If I do not use pointers, I have to make a definite choice whether to use FairTrackPar, FairTrackParP, or FairTrackParH in PndTrack. This seems unfavorable. If I use points, there remains the problem that FairTrackParam (the base class) is not a abstract interface class, which brings problems, like the impossibility of coying PndTrack (please see the first message of this thread).

Mohammad, what is your opinion on this issue?

Cheers, Christian
