I am writing my PndTrack as genfit Track, before running the kalmanTask.
When I have to set the GeaneTrackRep, I have to set the detector plane as U and V.
When I have to take this detector plane from the PndTrack, in particular from FairTrackParP,
what should I use? I can see many things inside:

GetIVer
GetJVer
GetKVer
GetV
GetW
GetTV
GetTW

but I am not so sure on what to use exactly as U and V (I have tried JVer and KVer but then I
have a "Assertion `_u!=_v' failed.".

Which is the right element to use?

Thanks in advance
