Hi,
actually GetJVer/GetKVer should be the right choice

The plane in GEANE is spanned by v, w vectors in the SD frame (u, v, w)... I don' t understand at first glance why you obtain such an error... how often does it happen? Always or just in some events?

Ciao,
Lia.

P.S. concerning the other functions:
GetV --> returns the v coordinate of the point (corresponding to the coordinate on the x-axis in the plane)
GetW --> returns the w coordinate of the point (corresponding to the coordinate on the y-axis in the plane)
GetTV --> returns tv, i.e. the derivative v'
GetTW --> returns tw, i.e. the derivative w'
...they are the track parameters in SD representation q/p, v', w', v, w.
