Hi Leila,

the macro ana_Lambda.C is a very old macro (I should remove from the repository maybe)
and therefore not adapted to the current data reader PndEventReader. In the old style
persistance candidates have been store as TCandidate in a charged and neutral array.
Meanwhile PndMicroCandidates are written to only one TClonesArray, and the read in
mechanism works differently.

You could take a look into another macro like ana_chic.C how the candidates are read in via
PndEventReader.

I try to update that macro as soon as possible.

Cheers,

 Klaus
