Subject: Re: Usage of Dirc in concord with certain detectors
Posted by StefanoSpataro on Tue, 28 Jul 2009 15:41:52 GMT

I have not understood why the simulation should be affected by the order of detectors.

Could you please show some sample, some plots, where you can see this effect?

In general the killed particles are just cherenkov photons reflected thousand of times inside the rods. And dch/gem/lumi are outside the dirc acceptance, then particles hitting the dirc will never enter inside those detectors.

Could you please give further informations?
