Hi Soeren,

I was not able to reproduce your problem with my installed trunk corresponding to SVN revision 6081. I runned emc_sim.C, emc_hit.C and emc_analys.C on 1000 events. Both the PndEmcHitProducer::AddHit and the inherited FairHit::GetDetectorID methods always yield positive integer values.

What did I do different? Just for the record: I compiled, linked and ran on SL4. Any ideas to nail the problem down?

Best regards,
Marc
