Hi all,

I try to plot position, charge and momentum from the PndMicroCandidate. When i write in root shell

```
cbmsim.Draw("PndMicroCandidates.GetPosition()")
```

i get the following message

```
Error in <TTreeFormula::DefinedVariable>: Can not call method GetPosition(.) on class  
without dictionary (PndMicroCandidate)!
```

```
Error in <TTreeFormula::Compile>: Part of the Variable "PndMicroCandidates.GetPosition()" exists but some of it is not accessible or useable
```

For the plot of charge an momentum i get the same error.
somebody knows, how i get this?

thanks.
leila
