Hi Soeren,

thank you for your fast response!

With EvtGen I have generated 1000 events. They are all in the output.evt file listed and the events looks quit fine.
So this shouldn't be a problem.
My DEC file is:

Particle pbarpSystem 5. 10.

Decay pbarpSystem
1.0 phi phi pi0 PHSP;
Enddecay

Decay phi
1.0 K+ K- VSS;
Enddecay

End

The DEC file is located in
/d/panda02/broth/proot/stable/workdir/dec_files

and the output.evt is
/d/panda02/broth/proot/stable/workdir/gen_files/PhiPhiPi0_2GeV_1M.evt
for running over it I copy and rename it (output.evt) to the tutorial/analysis/ directory, of course

Bernhard
