Dear colleagues,

as you might have seen, we will have the main part of the EMC session scheduled on Wednesday as a plenary session. In addition, I have arranged with Bernd to get an additional time slot on Tuesday, which should be used preferentially for discussions and not presentations.

Since I will go on vacation next Wednesday for two weeks, I would like to ask everybody for contributions. I will prepare the final agenda in the week before the meeting. Presently there are proposed already 4 15-20 minutes talks about:

M.Korzhik: Theoretical understanding of stimulated recovery.

V. Dormenev: New results on stimulated recovery

D. Bremer: energy, time and position resolutions obtained with PROTO60

T. Eißner: Status on quality control.

With best greetings,

Rainer
