Dear all and stefano,

Changing from g77 to gfortran works!  
Compilation seems to be OK, I have an executable file.  
But just one warning sentence, something like this.

Quote:

compilation...

```
/usr/bin/ld: Warning: size of symbol `pyint6_' changed from 1608 in /tmp/ccDg4lg9.o to 14028  
in /misc/cbmsoft/Etch64/jul09/fairsoft/generators/pythia6/pythia6319.o  
+++++COMPIRATION FINISHED+++++
```

Anyhow event should be generated without problem....  
Thanks a lot!

Cheers  
Donghee
