Dear all and stefano,

Changing from g77 to gfortran works!
Compilation seems to be OK, I have an executable file.
But just one warning sentence, something like this.

Quote:

compilation...

```
/usr/bin/ld: Warning: size of symbol `pyint6_` changed from 1608 in /tmp/ccDg4lg9.o to 14028  
in /misc/cbmsoft/Etch64/jul09/fairsoft/generators/pythia6/pythia6319.o  
+++++COMPILATION FINISHED+++++
```

Anyhow event should be generated without problem....
Thanks a lot!

Cheers
Donghee
