Subject: Hiding variables... take them seriously!!!
Posted by Johan Messchendorp on Mon, 28 Sep 2009 20:51:48 GMT

Dear developers,

More than a week ago, Mohammad switched on the -Wshadow flag during the compilation of PandaRoot. As a result, plenty of potential problems were revealed. Some of the developers started already correcting these warnings by following the coding conventions as we agreed upon more than a year ago. Nevertheless, there are still many (really many, more than 1500!!) warnings showing up during compilation. So please, correct these ASAP. It is better to do it now, then in a later stage!! If you have any questions related to this, do not hesitate to ask.....

Thanks in advance,

Johan.
