Hi Mohammad,

I have just renamed all member variables in the tpc package (not yet tpreco) to conform with the prefixing with f instead of _ in revision 6629.

I still get a lot of warnings. As far as I can see most of them occur in a situation like this:

```
const TMatrixD& cov() const {return fcov;}  
....  
....  
void SetCov(const TMatrixD& cov){fcov=cov;fhasaxis=false;}
```

I still believe this is acceptable code. Removing all these situations would take a bit more time.

Regards, Sebastian.

PS: For future reference I used this:
for i in *.{h,cxx} ; do sed -i.bak -e 's^\(W\)_\^1f/g' \$i; done
