Subject: Re: genfit tracking with GEANE not working since geometry update
Posted by Mohammad Al-Turany on Tue, 06 Oct 2009 12:16:59 GMT

Hi Felix,

Geane is now a task, there is no need that you initialize it yourself, it will be initialized by the framework, you just need to create it and add it with AddTask to the run.

The LoadGeometry is not needed any more, the Geometry will be taken from the prameter file and also the field.

Take a look to the macro/pid there it works!

about your crash: are you sure that your repository is up to date, can you call svn status -u in your pandaroot directory to be sure that you do not have any conflicts in base or filed directories and they are up to date.

also you can try to delete the parameter file in your macro directory and try if you get the same crash.

Mohammad
