Valery Rodionov wrote on Fri, 09 October 2009 10:10pandaroot we have an oldest magnet version (PandaSolenoidV833.root). So we are waiting for the new magnet revision.

For this reason, in the Torino design, the magnet version we are using is constructed inside the MDT classes, so that one can have the correct amount of iron without using the old-fashioned solenoid.

Still the coils are missing within this design, I hope Tobias can convert just them, in order to have almost everything running.
