Dear all,

For the organisation of the software developments, we decided to setup a website (Wiki) which provides a description of the various development projects, their status, and priorities (workpackages). A template workpackage has been defined and can be found at the site as well. In first instance, I asked the subcoordinators to provide descriptions of ongoing and not-yet allocated projects. This is presently ongoing and can be viewed at

<http://panda-wiki.gsi.de/cgi-bin/view/Computing/PandaRootWorkPackages>

I would like to ask all the developers, in particular the package managers, to provide missing workpackages and to take a look at and modify if necessary existing ones as well. The best is to create your own Wiki pages (see template) or modify the existing ones yourself. In the latter case, also inform the corresponding coordinator of the changes.

Anyone who is interested in taking up one or more of the workpackages which has not been assigned yet, is more than welcome to sign up !!!!

For any questions, don't hesitate to contact me,

With best regards,

Johan.
