Subject: Mvd restructuring

Posted by Ralf Kliemt on Tue, 19 Jan 2010 06:59:34 GMT

Hello everyone,

There will be some rearrangement of the Mvd classes.
For convenience I suggest to go to a revision <= 7487 if things are too screwed.

Rev. 7488:
I removed all parameters from the *ClusterTask constructors. From now these parameters are set in the RTDB ascii files in pandaroot/macro/params. This leads to incompatibilities of many digi/reco macros. I did changes to these which I could write to.

Please report problems, when you encounter some.

Kind regards, Ralf.
