Hi!

There is a new howto: Howto write a test-bench that can be used in teractively in CINT.

I have cleaned up the PandaROOT Wiki section a little bit. I found it to cluttered and I tried to make it more comprehensible. No big changes made. Just replaced headings by a bullet-list.

Cheers! Sebastian.

Hi Sebastian, I have to admit, I liked the headings more: large font size and possibility for sub-topics (without clicking into the topic first), but anyway, bullet list is of course also fine. For the test bench, can we maybe add the genfit/test example directly as <verbatim> on the wiki page ? (otherwise it is a bit non-easy to understand why this is as important for a normal day PandaRoot user as "HOWTO install" or "HOWTO use subversion" ...) - cheers, Soeren.
