Dear all,
I have implemented geometry following the model of the emc detector, that means, by using the geometry classes of root.

all the logical volumes created are included in one List, and afterwards each object of this list is added as a sensitive Volume by using AddSensitiveVolume function.

But when I run my macro, I get this warning, and I observed that any hits were produced.

+++++

```
++++ TG4Warning: ++++
  TG4SDServices::GetVolumeID:
  Sensitive detector Ge_Crystal1505 is not defined.
```

+++++

-I- CbmMCApplication -> simulation RunID: 1245722123

```
GEANT4 Geometry statistics:
  58 logical volumes
  57 physical volumes
  9 materials
  2 user limits
  3 sensitive detectors
```

Actually I produce 8 sensitive volume, but the number which appears in the information is 3.

Any ideas?

thanks

Alicia S.

In the code in svn, so that one can try to see what is happening?

Hi
sorry, for technical reasons I have not yet it committed.

Hi,

we had this problem before, it is the underscore in the name of the sensitive detector, remove the underscore from the names and try again.

regards

Mohammad

Hi
I have removed the underscore symbol from the sensitive detector name, and it seems to work.
But when I run now, the PndBoxGenerator for a multiplicity of 100 particle(whatever..) i get this error information:

```
>>> End of Event 0
-E- CbmStack: Particle index -999 not found in dex map!
Fatal in <CbmStack::CbmStack::UpdateTrackIndex>: Particle index not found in map
aborting
Using host libthread_db library "/lib/libthread_db.so.1".
Attaching to program: /proc/28321/exe, process 28321
`system-supplied DSO at 0xffffe000' has disappeared; keeping its symbols.
done.
done.
[Thread debugging using libthread_db enabled]
[New Thread 16384 (LWP 28321)]
```

Any ideas?

Thanks a lot
alicia.
