Subject: "jim++" event generator Posted by Olaf Hartmann on Wed, 06 Jun 2007 13:44:04 GMT View Forum Message <> Reply to Message

Hi all,

I put a standalone version of the PndEvtGen (or, as it was called within the family, jim++) into the following tar file:

http://www-linux.gsi.de/~olaf/jim++.tar.gz

It needs a root environment, the makefile produces a shared object library which has to be read when starting root. Then you just execute the macro (default.C). It produces a root tree file and an ascii file. The ascii file can be fed via "CbmAsciiGenerator" in PandaRoot.

Olaf.

PS: an additional macro (more close to PANDA physics): http://www-linux.gsi.de/~olaf/PndLLbar.C
