Subject: PndJRGen

Hi all,
I implemented standalone version of so-called Jim++ event
generator in pandaroot/pgenerators package.
I replaced the name Jim++ with name PndJRGen.
This generator is disposed in pandaroot/pgenerators/PndJRGen
package. For work with this generator, it is needed to enter
to the package, give command gmake. After that, to run a
macro-file under root.

I modified (a little bit) macro files for different pbar-p
reaction channels and disposed them in the package.
The names of the macros are connected with the reaction
channels. Output of the PndJRGen generator is a root-file.
You can work with output root-files from PndJRGen as with
root-files from DpmGen. It is enough to replace
"Dpm" to "PndJR"

If you want to create your own macro files
you can use manual given by Jim Ritman in HyperNews.
I copied it to
http://panda-wiki.gsi.de/cgi-bin/view/Computing/PndJRGen

Good luck, Aida

Subject: Re: PndJRGen

Hi,

Sorry, I have a small mistake in my previous message.

In string
>It is enough to replace "Dpm" to "PndJR"
instead of "PndJR" use only "JR"

Best regards, Aida

Subject: Re: PndJRGen

Hi all,

I have updated the list of macros for PndJRGen.
