Dear all,

Florian created a "stable" branch in svn

svn co [https://subversion.gsi.de/fairroot/release/pandaroot/1\\_0\\_0](https://subversion.gsi.de/fairroot/release/pandaroot/1_0_0)

It is based upon (as we decided in Dubna) rev 1079  
(with compiling versions of lhetrack and tpc).

I re-checked and the dashboard gives zero errors.

As discussed, the next stable version will be based upon  
"tags" (i.e. particular revision numbers which can be different  
for different subdetectors) and the tags numbers will be collected from each subdetector  
contact person (names collected by Johan on the protected Wiki page).

The normal svn branch will be kept as the development branch.

cheers, -- Florian and Soeren
