Hi Sebastian and others tpc/genfit experts,

I have tried to use the demo for genfit from your presentation, but when running the runMC.C macro I get an error:

```
dlopen error: /u/phawrane/ph/cbuild/lib/librecotasks.so: undefined symbol:
```

```
_ZTI16TpcPlanarRecoHit
```

```
Load Error: Failed to load Dynamic link library /u/phawrane/ph/cbuild/lib/librecotasks.so
```

```
*** Interpreter error recovered ***
```

The same error is obtained when I try to run the macro runMc.C from the macro.tpc directory.

There were no complaints during compilation-linking (I'm using cmake)

Any fast suggestion what is wrong ?

Thanks in advance

Piotr

Hi Piotr!

Try to update the tpc package and rebuild!

Cheers! Sebastian.

has the tpc macro already
these two libraries?

```
gSystem->Load("libtpcreco");  
gSystem->Load("librecotasks");
```

ALicias.

Thanks
the libtpcreco was missing

bye

piotr
