---

Hi all,

I am trying to read UrQMD event generator files from /d/panda02/urqmd\_smm (generated by Aida) and run with run\_sim.C.

---

```
CbmPrimaryGenerator* primGen = new CbmPrimaryGenerator();  
fRun->SetGenerator(primGen);
```

```
CbmUrqmdGenerator* urqmdGen = new CbmUrqmdGenerator("./pbarC_3_GeV.root");  
primGen->AddGenerator(urqmdGen);
```

---

but I get

```
**** GTRIGI: IEvent= 1 IDEVT= 1 Random Seeds = 4357 0  
-E CbmUrqmdGenerator: Wrong event header  
-E CbmPrimaryGenerator: ReadEvent failed for generator  
StopRun() exiting not safely oopps !!!@ @ @!!!
```

---

Additional observations:

a.) I also tried with other files (e.g. pbarAu\_4\_05\_GeV\_1.root), same effect.

b.) I can open the files with root and TBrowser and see that everything seems to be fine inside (except obviously the event header).

c.) filename is definitely correct (if I give the wrong filename, then I get a message "file not found"). So it means, the file is definitely opened.

Any idea?

Soeren

hi Soeren have you tried to read the file with the whole path

and to use the CbmUrqmdSmmGenerator?

```
Tstring inFile = "/d/panda02/urqmd_smm/pbarC_3_GeV.root";
```

```
CbmUrqmdSmmGenerator* urqmdGen = new CbmUrqmdSmmGenerator(inFile);  
primGen->AddGenerator(urqmdGen);
```

At least for me, it is working like that.

best regards  
Alicia.

Yes,  
PndUrqmdSmmGenerator is the correct generator for Aida files (in libPGen).  
CbmUrqmdGenerator is for the "standard" UrQmd output files, while we have a TParticle  
structure that can be browsed in ROOT.
