Dear pandaRooters,

I just tried to install a clean version of pandaRoot from the repository. When I try to use cmake ./pandaroot I get the following error message:

```
-- You're not using the GSI installation of the external packages.
-- If any problems occur this can be due to the fact that the macros
-- were mostly tested at GSI. If you find any problems please contact

ke-2.4/Modules/CMakeCXXInformation.cmake
-- Configuring done
```

I could figure out that the problem is related to the command CHECK_GSI()

If I comment out this line everything runs smoothly buy I do not think that this is the suggested procedure .

Ciao,

Tobias

Hi Tobias

I tried to reproduce your problem, but i don't get your error.
I on't understand why the behavior changes if tou uncomment the
CHECK_GSI() macro, because the macro is executed much earlier.

Can you please check if all your cmake macros in the directory
cmake/modules are up-to-date.

In the moment i don't have any better idea.

Ciao

Florian

Hallo Florian,

thank you for your fast reply. Unfortunately the folder cmake/modules is at the latest revision.

It was a clean checkout I did yesterday afternoon.

At the moment I just commented out the CHECK_GSI() command and everything works despite the PATH-variable where I have to add my old PATH.

Viele Grüße

Tobias
