Hi all,

We performed changes in UrQMD+Smm model for production of Xi and Xi\_bar in every event.

I calculated with this variance of UrQMD+SMM reactions:

- 1) pbar+C, 3 GeV/c, 10000 Events;
- 2) pbar+Si, 3 GeV/c, 10000 Events.

The output files - apC\_Xi\_3GeV.root, apSi\_Xi\_3GeV.root are disposed at lxi00X.gsi.de

in directory:

/d/pandaroot02/urqmd\_smm/Ksi\_prod/

If you are needed other reactions with production of Xi-baryon, please, write me.

Good luck, Aida

Hi Aida,

i want to thank you

very much for your efforts

in developing this event generator files

inside the Urqmd Model frame, which are for me

very important for my work.

I will check them immediatly.

But i wonder if it is possible to

have instead of 10K events, 500K events

since that the stopping rate of Xi minus

is really low in the detector.

Thanks again,

best regards

alicia.
