Hi Vanni,

The paramater EmcDigiPositionDepth in emc.par file is parameter which is used for EmcCluster position reconstruction and has meaning of the effective depth of deposited energy inside crystal, i.e. value 6.2 means that cluster position is reconstructed asuming that energy in each crystal whould deposite in one point at 6.2 cm inside crystal. This paramter should be optimised to achieve best position reconstruction.

Dima

Hi Dima,

Thank you.
