Subject: Dashboard ofline Posted by Ralf Kliemt on Wed, 16 Apr 2008 09:21:16 GMT View Forum Message <> Reply to Message

Hello everyone,

The Dashboard is off line since Monday. I just want to warn everyone that the Dart.sh script stays idle at the end when it wants to submit the logfiles. This causes for my case the cpu running at high occupancy until I kill it. You might experience the same, especially for the nightly builds.

Greetings, Ralf.

Hi Ralf

The dashboard is running again. I don't know why it hangs again. What i wonder about is the comment that the script stays idle forever if it can't submit the results. On all machines i run the script it stops if it is impossible to submit the results.

If anybody else has the same problems as Ralf please let me know.

Ciao

Florian

Here in Gießen,

my cronjob "Dart.sh Nightly >> log.txt" stops if the dashboard machine is not working. Simply it does not send the informations.

Hi all.

Just to notify you: The dashboard is down again, causing my ctest from the cronjob to run at

full cpu load until killed...

Everything went fine, exept for the submission to the dashboard. I wonder what the problem is. Some overflowing logfile on the server?

Anyway. **Toggle Spoiler** reate new tag: 20080426-2359 - Nightly Start processing tests Configure project Each . represents 1024 bytes of output .. Hi Ralf

The server runs again. I still don't understand why the server stops frequently. On the other hand i don't understand why your process don't stop if it can't submit to the dashboard. On all other sites this is no problem. We are testing the successor of the dart2 dashboard. I think with this new dashboard the problem should be gone.

Ciao

Hello Dashboraders,

The site is down again, at least since Mo. 8th of Sep. I get mail delivery fails for the cronjob, too.

Greetings from Ferrara, Ralf.

Hello, again.

I just realized the site is blocked from here somehow. If I connect from Dresden it works.

Ciao & sorry, Ralf.
