Subject: TPC dEdx
Posted by Sebastian Neubert on Thu, 17 Apr 2008 17:39:36 GMT

Dear colleagues,

in the standard TPC macros runMC, runDigi and runReco there should now also be the first version of the dEdx available. Viola has implemented this and is still working on the hypothesis testing.

It would be interesting to know what is the status of the discussion for global PID. I am not quite sure about what was decided to do there. Anyhow we aim to deliver (normalized?) probabilities for each particle hypothesis as well as raw chi2 values.

Kind Regards, Sebastian.
