Hi all,

I prepared some Wiki pages for the PandaRoot Tutorial on tuesday in Krakow. Feel free to take a look to

<http://panda-wiki.gsi.de/cgi-bin/view/Computing/PandaRootTutKrakow08>

As preparation for the tutorial session you should have a running PandaRoot installation of Revision 3056 (also noted on the wiki page).

When you want to be able to run EvtGen there are also some extra steps to be done, since it's not build by default.

What also is needed to include the line

```
add_subdirectory(tutorials/anatask)
```

in your main pandaroot/CMakeLists.txt and do a 'make install' in your build directory.

So, I hope now, that everything will work and look forward to see you then over there next week!!

Best wishes and a have nice weekend,
Klaus
