Dear all,

When building pandaroot using gcc 4.3.X, this class produces the following error:
/pandaroot/hyp/PndHypHit.cxx:65: error: 'abort' was not declared in this scope
This problem can be solved just by adding the line
#include <algorithm>
to PndHypHit.cxx. Unfortunately, I don't have write access to this directory. Can somebody add this line to that file?

Kind Wishes,

Hi,
I have just committed the file.
For my compiler it works as it was working before, please tell me if now it is fine for you.

Hi,

It works fine now, .
Thank you.

Hi
sorry yesterday the email server was not working and i could not read your message.
As Stephano mentioned, it has also being working for me before.
Anyway thanks Stephano for committing this change.

Alicia.

Hi,

No prob, .

As of gcc 4.3.X some of the library routines are changed and the compiler is a little bit more restrictive. This way the SIG_X functions are all placed in the algorithm header file.

A question:
Why do you use a SIGABRT signal in this module?

Kind wishes
/MB

Yes, that is going to be rearranged
. I will commit the changed one today.

regrads ALicia.

Okay!,

Sounds perfect.

Regrads
