
Subject: New geometry of the Backward EndCap

Dear All,

I added new macro for creation of the Backward End-Cap EMC geometry in
trunk/macro/emc/

and it is called:
createRootGeoFileBwEnd_FwEndCapGeo.C.

The new geometry for the backward endcap is the same like for the new forward endcap.
The copy numbers are created in the same order like for the first (old) endcap,
so only needed changes have been done in following classes:

trunk/emc/EmcMC/PndEmc.cxx and PndEmc.h
trunk/emc/EmcTools/PndEmcStructure.cxx
trunk/emc/EmcTools/PndEmcMapper.cxx

If you want to test it, in the
trunk/macro/emc/sim_emc.C

macro, there is additional SetGeometryFileNameTriple() function added, which contains 3
parts of EMC geometry.
The geometry files: emc_module125.dat and emc_module4_FwEndCapGeo.root are also
added to svn.

In case of any problems, please let me know.

Best regards,
Ola.

One note more...

If you want to use the new geometry of the backward encap,
use MappVersion = 6 (MapperVersion: Int_t 6)
in the macro/params/emc.par.

Regards,
Ola.

Good morning,

I updated the code for backward end-cap
and I added more information about it in the sim_emc.C macro.

For me, different combinations of EMC geometry works.

I think it can be useful for Dmitry and Mamen.

Have a nice day,
Ola.
