Hallo,

The new external packages are now available (see <http://fairroot.gsi.de>):

Packages:

ROOT 5.24  
Geant4 4.9.2.p01  
Geant3.21+vmc. (r245)  
VGM 3.02  
Geant4 VMC (2.6)  
CLHEP 2.0.4.2  
ApMon -Application Monitoring API for C++ (v. 2.2.6)  
Cmake 2.6.3  
GNU Scientific Library (1.12)  
PLUTO (v.412)  
Pythia6  
Boost-Jam (3.1.17)  
Boost (1.39)

To download it:

From SVN: `svn co https://subversion.gsi.de/fairroot/fairsoft/release/july09 fairsoft`

tar file: [http://fairroot.gsi.de/download/july09/fairsoft\\_july09.tar.gz](http://fairroot.gsi.de/download/july09/fairsoft_july09.tar.gz)

new Features:

CUDA interface and example is added to Fairbase  
VGM is now build with cmake  
improved installation scripts

tested on:

Mac OS X:	10.5.7
SUSE :	10.3, 11, 11.1
Fedora Core:	8, 9
Scientific Linux	5.1
Debian:	Etch, Lenny
Ubuntu:	8.10, 9.04

P.S:

For those who already used the svn version of this package, you where using the trunk (<https://subversion.gsi.de/fairroot/fairsoft/trunk>) either you make sure that you use the released version (`svn update -r 5991`) or you make a switch (`svn switch https://subversion.gsi.de/fairroot/fairsoft/release/july09 .`)

On the GSI cluster:

Debian Sarge is not supported anymore  
GSI users please use lxetch32.gsi.de for logon  
Set your SIMPATH to /misc/cbmsoft/Etch32/jul09/fairsoft (or  
/misc/cbmsoft/Etch64/jul09/fairsoft if you use 64 bit machines).

regards

Mohammad and Florian

Dear Sir,  
I have installed fairroot july 09 version in one of the machine. The installataion was without errors.  
But when I am trying to install cbmroot JUN09 version it shows the following error. I am attaching the error message. Kindly advice me how to rectify this error

Best Regards

Hi,

This error was already corrected in fairbase one week ago, it is due to changes in ROOT 5.24.00. I put the externals of the jun09 release to the new one and added an include to the CbmRich.cxx. Just make an svn update in your cbmroot-jun09 release and it should work!

regards

Mohammad

I have successfully installed the externals july09 anmd cbmroot trunk on MAC Snow Leopard. I had to overcome (with Florian's help) some problems, which I report here, as they may be helpful for others.

First, you need on your MAC a C++ compiler, of course. If you do not have it, you can for instance install the XCode package.

Then, you need in addition a fortran compiler. The best choice is gfortran, which you can download from [here](#).

Now you can download and install the externals as described on the FAIROOT web site:

```
svn co https://subversion.gsi.de/fairroot/fairsoft/release/july09 fairsoft
```

Before running the installation script, I had to

modify fairsoft/scripts/check\_system.sh on line 155: change "`= 5`" to "`> 4`" such that it is recognised that the system is 64 bit;

modify fairsoft/scripts/set\_compiler.sh on lines 24 and 25: change "`1,4 d`" to "`1, 6 d`" (gfortran -v seems to deliver different outputs on different platforms);

create a link in `/usr/local/lib/x86_64`: `ln -s ../libgfortran.a`

create a link in `/usr/include`: `ln -s malloc/malloc.h`

Then, just go to the top directory where you installed fairsoft and call the installation script: `./configure.sh`

Then read a good book, go to the movies, or just go home. It will take some time.
