Hello,

it is not clear to me what is the actual use of the "recotask" package.

I can see that the classes there belong to the old genfit tutorial, and that there are several tools not used in the global code, or at least not for general Panda usage. I have run also some general reconstruction macros taking out the recotask package, without problems.

For this reason maybe it could be better to move this package, which is up to now in the main folder, into some other place, maybe tutorials, maybe PndTools, or to redirect the classes into some other place (maybe genfit?). In order to have one library less to load, and one not-common folder less in the main pandaroot directory.

What do you think?

Hi Stefano!

Originally the plan was to put the main common reconstruction tasks into this package. If this is now done at another place...

Regards, Sebastian.
