Hi everyone,

I hope that's not a stupid beginner's question:

I created a geometry based on the macro `sim_complete_stt.C`  
and try to visualize with the `drawGeo.C` macro.

It looks nice (apart from some details I don't want to  
discuss now) but the MVD is completely absent although  
it is apparently loaded: At the initialisation stage  
"RTDB container factory PndMvdContFact" is printed.

Also in `sim_complete_stt.C` the MVD is clearly present,  
where it is initialized via:

```
Mvd->SetGeometryFileName("MVD_v1.0_woPassiveTraps.root");
```

Any clues what's going wrong?

Thanks for the help.

Cheers,

Lars

Just for completeness here a picture.

Lars

Dear Lars,

the problem ist the VisLevel(3) setting in the macro. The vis level tells you down to which hierarchy level a geometry is drawn.

Change it to 10 and it should work:

```
gGeoManager->SetVisLevel(10);
```

Cheers,

Tobias

Dear Tobias,

Thanks for the fast help. I had tried level 4, but that did not change it.

So I was right: It was a beginner's question

Many thanks again.

Cheers,

Lars

Hi Tobias,

One more follow-up: I would like to visualize events in the MVD using Eve. I started with the eventDisplay.C macro but again cannot see the MVD. I can see hits of previously simulated events, even for the MVD, but not the detector itself.

Trying to do gGeoManager->SetVisLevel(10) does not work, since at each update it is reset somewhere.

I was trying your DisplayGeometry.C but there the event part is missing. There is no FairEventManager.

Any hints would be helpful. Thanks a lot in advance.

Cheers,

Lars

Dear Lars,

the problem is the same but the cure is different. You have to set the vis level for Eve and not for the GeoManager.

This can be done in the Eve Main Window. Open Scenes/Geometry scene/cave\_1. Here you have the settings for VisLevel. Change it to 10 and it should work.

Cheers,

Tobias

Hello,

There is the possibility to set the VisLevel to 10 by default:

In FairEventManager.cxx:54 the constructor TEveGeoTopNode(TGeoManager\* manager, TGeoNode\* node, Int\_t visopt=1, Int\_t vislvl=3, Int\_t maxvisnds=10000); is called without providing a value for vislvl.

Changing this will influencd CBM. Is a higher VisLevel a problem there, Mohammad?

Just give me green light and I commit it.

Regards, Ralf.

With a high visualization level, drawing the geometry starts to become slow for some machines. I don't know if it is good to have a higher vis level by default, maybe only the user who wants to see particular details should set this flag by hands.

Just my opinion.

Hi,

I would agree with Stefano, few months ago we had a default value 10 for the Vislevel, and with this some people had problems that some detectors in both PANDA and CBM need long time to display. So we have to find a convenient way to make it easier to change the vis level!

regards

Mohammad

Well. Then I suggest to add a SetVisLevel() function to FairEventManager which has to be called before the FairEventManager::Init().

Ralf.
