Has anybody an idea about why almost all the qa macros have crashed this night?

============== FairRunSim: Initialising simulation run ==============

*** Interpreter error recovered ***

The only changes were a modified par number from my side, and additional materials in media_pnd.geo (Ralf).
Who is the guilty guy?

very good question.... even the "stable" release gave an enormous amount of failures, although *nothing* has changed there.... ????

Johan

Hi,

I'm the guilty guy, I suppose. Adding materials should be done BEFORE a certain line in media_pnd.geo. Don't ask me why.
AUTONULL
The problem then is a memory leakage which fillst up the memory quite fast.
I corrected that already and it runs on my computer.

Kind regards,
Ralf.

Btw. It is saturday.
