Hi,

Could it be that your external packages do not have the latest modifications which where done
for glpk? if your fairsoft was installed from SVN then please go to fairsoft directory and call
"svn update" then you need to delete your basic/glpk-4.39 directory . After that just call the
configure.sh again.

regards

Mohammad

Thanks, Mohammad!!

No, we didn't update anything anymore since the /feb10 release (which is even more stable than the /stable). Too many changes because of the collaboration meeting, almost every day. Too dangerous before DPG.

(we just tried the to compile /trunk in order to find out if the dpm with mode 1 and mode 2 is also crashing in the /trunk, and not only in the /feb10 and in the /stable).

cheers, Soeren

Hi,

I meant the external packages and not pandaroot. The jan10 release of the external packages has get some corrections related to glpk.

Mohammad
