Subject: fluka pbarp events (test purposes)

Hi all,

I put several files containing events calculated with FLUKA on the GSI linux file system:

/d/panda02/fluka/

These are pbar-p events at 3 GeV/c which are in .evt format and should be readable by
FairAsciiGenerator.
They can be used for testing.

I'll change this however to the usage of root files and provide more reactions. That way is more
appropriate because the initial vertex should be delivered for each track and not for the whole
event (which means that all primary tracks are supposed to come from one vertex).

Cheers
Olaf.
