Dear all,

The aim is to get a new release one of these days. The idea is that we update the stable branch and meet all the requirements. Since I don't see anyone updating the stable branch, I will make a snapshot of the trunk branch and replace the existing stable release. However, one of the requirements is that we have to ensure that all the QA macros successfully pass the test. This is presently not the case. So, please take a look at the dashboard and fix the remaining issues, so that I can proceed.

Thanks in advance,

Johan.
