Dear all,

A new production release has been derived from the stable branch rev. 8759 and is now made available via subversion...

svn co <https://subversion.gsi.de/fairroot/pandaroot/release/may10>

Please note that this version should be used with the latest fairroot release

svn co <https://subversion.gsi.de/fairroot/fairsoft/release/jan10>

Furthermore, the release does not contain the latest major changes in the MVD code that can be found in the trunk branch.

Please inform us in the case you find any problems in the installation and usage of the code.

Have fun,

Johan.
