Hi

I was trying to use EvtGen.  
After going to pgenerators/EvtGen and  
./simpleEvtGen doesn't work

Do I have to compile it?  
I tried to compile it in pgenerators/EvtGen dir  
by the command ./configure  
which shows:  
ls: /lib/libpythia\*.a: No such file or directory  
ls: /lib/libphotos\*.a: No such file or directory  
ls: /lib/libpdf\*.a: No such file or directory  
Any path to be set?

Is there any wiki page where can I get  
the instructions which work out of box?  
The EvtGen Wiki psge somehow confused me.

Please let me know how to proceed.

best regards,  
Dipanwita

Hi,  
there is a wiki page about it:

<http://panda-wiki.gsi.de/cgi-bin/view/Computing/EvtGen>

Good luck.

Hi Dipanwita,

I think your problem could be that probably you didn't set the CERN library.

export CERN\_ROOT=...

(whereever your CERN library is).

However, there is now another (probably easier) way to run EvtGen, namely the PndEvtGenDirect, developed by Björn Spruck (but undocumented yet). I think so far we only have a small tutorial example existing.

<http://panda-wiki.gsi.de/cgi-bin/view/Computing/PandaRootCharmoniumTutorial>

under item (3).

```
PndEvtGenDirect *EvtGen = new PndEvtGenDirect("psi(2S)","PSI2S.DEC");  
primGen->AddGenerator(EvtGen);
```

is how to use it directly in your simulation macro.

You need a few ASCII files (evt.pdl, DECAY.DEC and your own decay file, e.g. PSI2S.DEC in this case), but it is maybe easier than compiling simpleEvtGen.cc.

cheers, Soeren
