Subject: Implementation of PndGemMCPoint::SetSensorId(int) is missing

Dear developers,

I got a linker error while writing external code because the above mentioned function is not implemented. Please fix this.

Btw, can anybody explain to me why CINT does not give any errors if there are symbols plainly MISSING in the libraries? I find that pretty annoying.

Cheers

Felix

Hi,
I have fixed it.
From CINT, considering that the function is a "void", it is processed as an empty function doing nothing, then it does not produce errors because it does not need neither a return.
Of course, C++ is a bit more "touchy"...
