Dear colleagues,

in the special Technical Board meeting last week the SciTil-Version of a timing barrel mechanically attached to the barrel DIRC was presented and discussed.

At the PANDA collaboration meeting in March several decisions on detector options will be made. For the TOF the options Scintillator/RPC/SciTil/none/later exists. Here "later" stands for "keep the free space for a TOF". Do you plan to give a contribution about your favorite option? It is also possible to setup an EVO session.

Best regards

Carsten
