Dear all,

I'm trying to mark a function as "deprecated" using the attributes. When using C++ compiler directly, everything goes fine and it works. But, building the code as a part of PandaRoot fails with the following message:

```

```

The function definition is as follows:

```
void WriteDataSet(std::string const& outFile) __attribute__((deprecated));
```

Anybody any idea what is going wrong and how it can be solved?

Kind wishes,
MB.
