Subject: Possible Programming Error(build fails)
Posted by M.Babai on Tue, 21 Jun 2011 09:54:12 GMT

Dear all,

I was not able to compile pandaroot using GCC 4.6. The error comes from the file "pgenerators/PndFlatParticleGenerator.cxx"; line:167.

Looking inside the file I can see the following:

```
void PndFlatParticleGenerator::CalcActValues(PndRangeValues* val1, PndRangeValues* val2, PndRangeValues* val3)
{
if (val1 == 0)
  val1 = &PndRangeValues();
if (val2 == 0)
   val2 = &PndRangeValues();
if (val3 == 0)
   val3 = &PndRangeValues();
 etc. etc..........
}
```

I think this should be corrected by using the "new" operator. Can someone, please, have a look at this and fix this issue?

Kind wishes,
/A.

Dear Mohammad,

I have made the changes and uploaded them, but I did not test the functionality of the generator.

Please test it if it compiles for you now.

Cheers,

Tobias

Hi Tobias,

Thank you.
It compiles now fine, . I will run a clean dashboard build now.

Cheers,
M
