Dear all,

As announced during the last couple of pandaroot meetings, there will be a time-based development session/tutorial/howto organized on the first day of the next collaboration meeting, e.g. on Monday the 5th of September. The session will start in the morning (~9-10) and all the core developers for pandaroot are asked to participate in this session. This means that also the detector code developers should participate. The goal is to adapt the pandaroot code to a time-based framework as soon as possible.

Best wishes,

Johan.
