Hello Everybody

I would like to take a look in to the Lambda-Lambda_bar runs produced on the grid. As I am waiting for my grid certificate, the plan was to run a smaller simulation on my own computer, but in the folder

trunk/macro/run/tdrct

I can only find the .dec file for the other channels and not for lambda-lambda_bar. Could someone upload the macro used for the production on the grid, together with the needed files, so that I could run the simulation myself?

thanks

Sverre

Hello Stefano.

I see no changes in the repository since last night. Did you check in the macros?

cheers

Hi,
I committed the macros in july, because it is what we are using for production.
However, I have committed the code also into the trunk right now.

Thanks a lot for the quick reply!

Sverre

I have also updated the pother folder, with the "new" reco macros used in the production, and adding my analysis macros for eta_c and psi3770 channels
