
Subject: bug in PidCorrelator

Posted by [Johannes Rauch](#) on Thu, 28 Jul 2011 15:52:05 GMT

[View Forum Message](#) <> [Reply to Message](#)

Hi,

running the eta_c macros i came across a floating point exception after ~100 events.

I think it just happens that there is a division by 0 or some values exceed the numerical boundaries.

These cases should be prevented.

Thanks

Hi Johannes,
Quote:0xb0294edd in FairGeanePro::Propagate (this=0x1a414bf0, TParam=0x1a414960, TEnd=0x1a414e98, PDG=-211)
at /nfs/hicran/project/panda/SIM/jrauch/clean/geane/FairGeanePro.cxx:144
I looked in the line 144 in FairGeanePro.cxx but it is a white line for me, are you using an up-to-date geane? Did you modified it... or maybe the source of the crash is elsewhere and crashes here by chance.
Could you please check whether your geane and trackbase are updated and not modified locally?

Cheers,
Lia.

You can try to add a FairTrackParam Print statement just before the propagate function, in order to understand what is wrong in the initial parameters for propagation.

Hi,

First I want to mention that I didn't see such an error with eta_c macros running 2000 events.

And I can here only speculate where it comes from.

So I guess that it could come not from the line 144 but from 143, where array of doubles is copied by element to array of float.

```
ein[i]=fCov[i];
```

And array of double is declared on line 134

```
Double_t fCov[15], fCovOut[15];
```

And I can guess that on some platforms it's initialised not with zeros but with random double numbers which exceed sometimes limits of float.

But it's only a speculation.

Dima

[View Forum Message](#) <> [Reply to Message](#)

Hi Dima,
Quote:Double_t fCov[15], fCovOut[15];

And I can guess that on some platforms it's initialised not with zeros but with random double numbers which exceed sometimes limits of float.

fCov is filled just after the declaration with TParam->GetCovQ(fCov) so it should not depend on the local initialization of fCov here, but rather on the covariance matrix elements which are inside the FairTrackParH.

I agree with Stefano to try the FairTrackParH::Print() function to see whether we have these strange numbers or not, then we can investigate where they come from. Maybe they are wrongly defined somewhere and then passed to the FairTrackParH when it is created...

Cheers,
Lia.

[View Forum Message](#) <> [Reply to Message](#)

Hi,

sorry, I put some debug output in my code. Its the line Dima had under suspicion.
I will try the print function.

Johannes

Subject: Re: bug in PidCorrelator

[View Forum Message](#) <> [Reply to Message](#)

Hi,

I reverted my FairGeanePro to make sure I didn't mess up something there. Then I added a

```
fRes->Print();
```

in line 48 (just before propagation) in PndPidTrackInfo.cxx

It crashes now somewhere else, but I also experienced this crash already yesterday.

So maybe there are even two bugs.

Any ideas?

regards,

Johannes
