Hi,

i have some silly problem.
I exceeded my disk quota (for example to see with fquota_list), so i deleted all my files, my user folder (/panda/user/p/pitka) is now totaly empty and it still states i use to much disk space.

I guess i did some error in my jdl files and some simulated data is saved at some strange place blocking everything.

Anybody has an easy solution to this?

Thanks a lot in advance

Andreas

Hi Andreas,

this problem was not really caused by to many files, i guess it was related to the upgrade to the newest version of alien!
i increased the totalSize of your quota

cheers,
Rene

Hi again,

my Problem seems to be similar to what Donghee experienced. Nearly all my jobs end up with

ERROR_SV and the corresponding files still block my disk quota.

Is there perhaps some problem with the access rights?

Best regards

Andreas
