This morning I installed the jan12 externals with version 14184. This was my first upgrade since june 2011 or so.

Usually I take my "reconstruction chain macros" from trunk/macro/pid and these are like:

```
root run_sim_sttcombi_pgun.C"(1000,-11,0.2,10)"
root run_digi_sttcombi.C
root run_reco_sttcombi.C
root run_pid_stt.C
```

But in the new version the probabilities are all set to 0.2 for ALL detecteurs. Some of the EMC cluster information seems to be missing as well (which might explain why the probas are wrong).

So the question is: can somebody point me to a valid reconstruction chain including the pgun and evtgen macros?

Thanks in advance,
Ronald Kunne

Hi,
I had forgotten to switch off the "fast" option.
If you update macro/pid now you will have the correct version of run_pid_etc.
